

Propeller RPM model:

$$T_i \approx k_T \omega_i^2$$

- ω_i : Rotor angular speed
- T_i : Thrust of i-th rotor
- $\mathbf{M}$: Moment

1) Infer physical attribute (weight)

$$\sum_i \omega_i^2 \propto \sum_i T_i \approx G$$

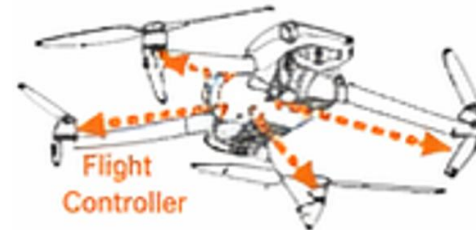

ω

$T \downarrow$ Inference

2) Infer flight intent (command)

$$\Delta \omega_i^2 \propto \Delta T_i \propto M_{roll, pitch, yaw}$$

Internal

- **Attribute:** G
- **Intent:** command
